

(Integration of SSM Component)

1. RSBY Beneficiary Card Member details array length should not be greater than 15.
2. FKO must be registered in the DKMA for whom the signed data needs to be uploaded.
3. During creation of signed data the following points should be taken care of: -
  - a) There should be no space between the beneficiary data and the data separator "/".
  - b) There should be no space after last record in the signed data.
  - c) To remove the spaces at the end of a file the cursor should be placed at the end and delete key should be pressed 2-3 times.
4. In Card type, BPL status and Category field the values should be double digit for example If M is given 1 as card type it should be 01, if its 0 then 00 should be given.
5. The length of array for insurance details in SSM should be two. First record should be for Main policy and second record should be for Add On policy.
6. For Add on Policy record, if the length of Insurance company code or Policy number is less than the maximum size mentioned in the specification then they should be padded right with spaces. If the length of both is less than the specified length than the SSM will through an exception.
